

1 How persistent is the signal?

2 What the model sees

tactile map P_t

$$\mathbf{s}_t = [F, c^x, c^y]$$

total force and centre of pressure,
one state per frame

origin t

tactile history L

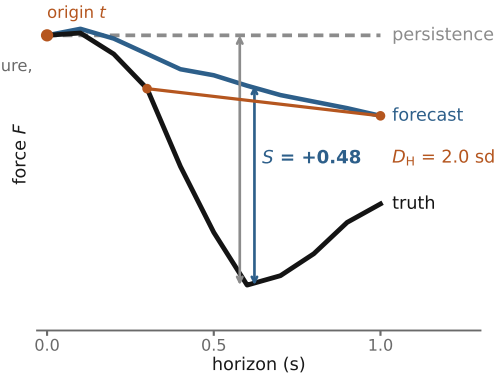

$H=1\text{ s}$

origins step by one sample

tactile history only
no future action, pose or image

3 One forecast, three questions

one held-out origin (peel, $\mathcal{R} = 0.61$ for this action)

$\mathcal{R}$ how hard is
copy-last?

signal property

$\rightarrow R^2$

is the future state
right?

$\rightarrow S_{\text{pers}}$

better than
copy-last?

$\rightarrow D_H$

is the path
right?

model scores — each only readable against $\mathcal{R}$
