

1 How persistent is the signal?

every one of the 290 ActionSense recordings

$\mathcal{R}$

how hard is
copy-last?

R^2

is the future state
right?

S_{pers}

better than
copy-last?

D_H

is the path
right?

signal property

model scores — each only readable against $\mathcal{R}$

2 What the model sees

tactile map P_t

$\mathbf{s}_t = [F, c^x, c^y]$

total force and
centre of pressure,
one state per frame

origin t

tactile history L $H=1\text{ s}$

origins step by one sample

tactile history only
no future action, pose or image

3 One forecast, three questions

one held-out origin ($\mathcal{R} = 0.61$ for peel)
